Energy conservation Policy

Introduction

It is our duty to convey the importance of energy conservation to the future generation to prevent the depletion of available energy resources. Various practices are implemented through the organization with the aim of maximizing utilization of limited resources and eliminating wastage.

Objectives

1. To promote the principles of reduce, reuse and recycle
2. To create awareness among stakeholders about greenhouse emissions due to uncontrolled use of energy
3. Efficient use of available resources without wastage
4. Use and conserve renewable energy sources like water, sunlight to achieve energy independence
5. Developing strategies to meet the increasing energy demand of our time

Methods

1. To provide awareness about energy consumption by organizing various programs like awareness classes, observation days, activities etc.
2. Reducing consumption of electricity, plastic and water on campus
3. Effective management of sewage plants
4. Replacing conventional lighting with LED bulbs and tubes
5. Water conservation through rain water harvesting and open well recharge system

6. Use of energy efficient appliances on campus

7. To reduce energy consumption and wastage, buildings are provided with maximum ventilation.
